

A. Blast Lineage States (scRNA-seq)

Cluster 2 blasts represent a differentiated monocytic phenotype

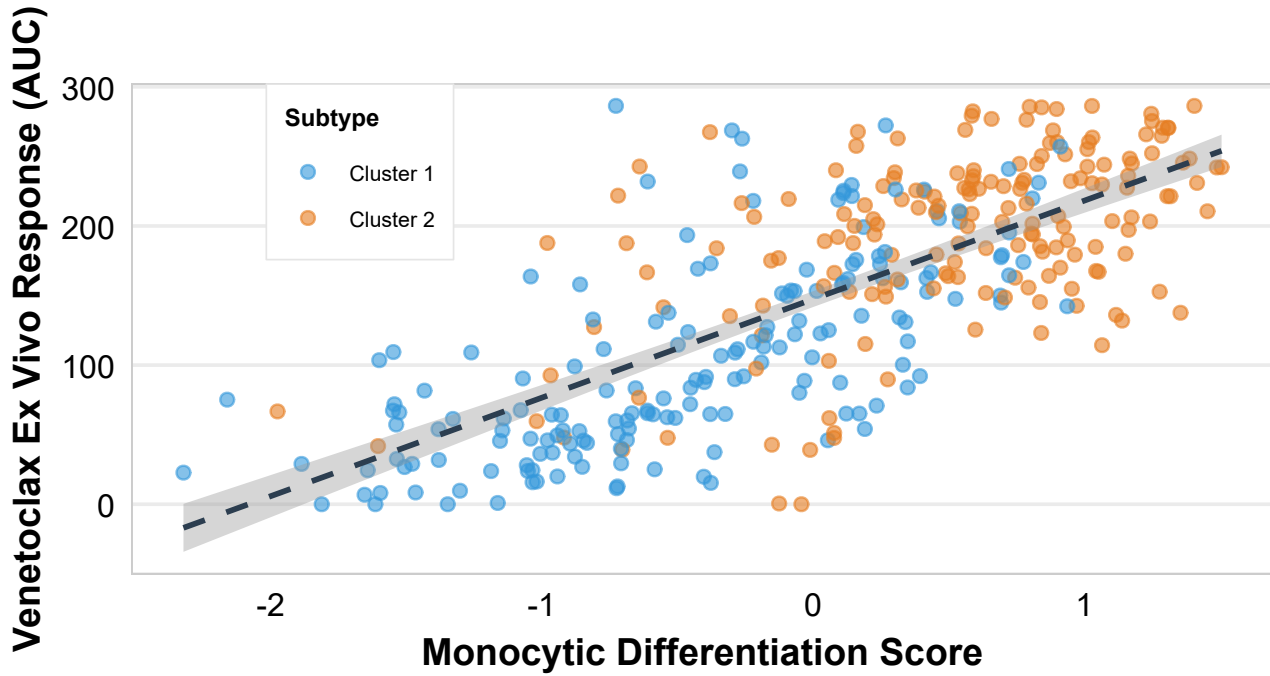

B. Longitudinal In Vivo Clonal Selection

VRS-High cells are depleted; monocytic cells expand at relapse

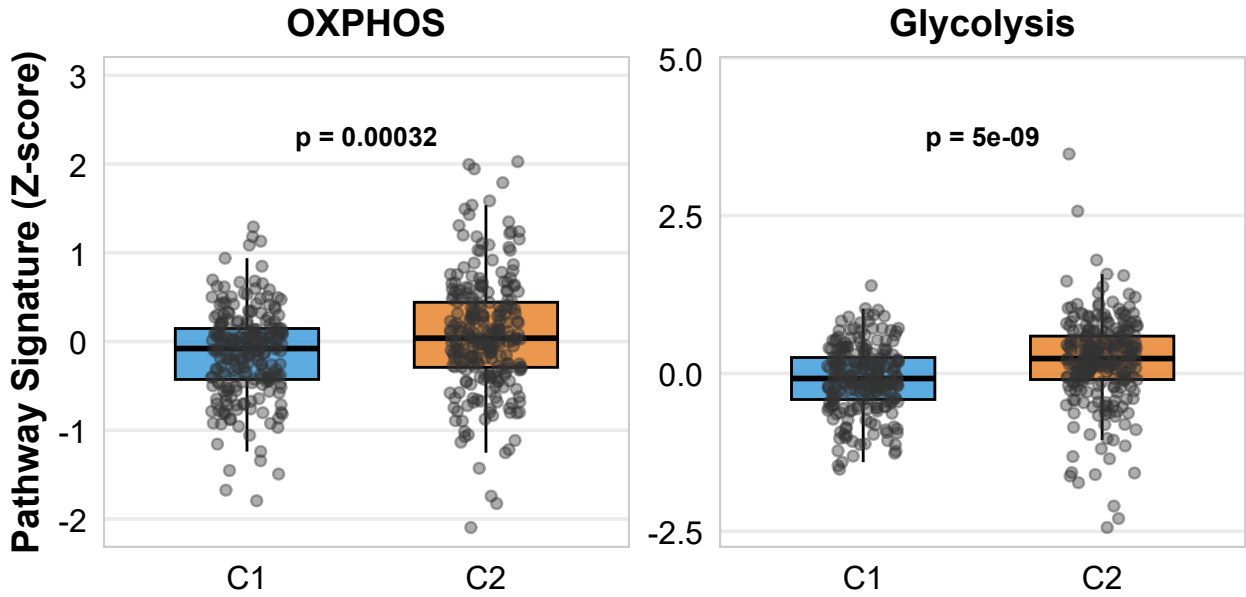

C. Monocytic Shift vs. Venetoclax AUC

Spearman Rho = 0.73 ($p < 2.2e-16$) | Resistance Axis

D. Metabolic Achilles' Heel

Cluster 2 utilizes high-energy pathways to survive

E. Proteomic Validation

Enrichment of anti-apoptotic MCL1 and monocytic CD14
