

A. Blast Lineage States (scRNA-seq)

Cluster 2 blasts represent a differentiated monocytic phenotype

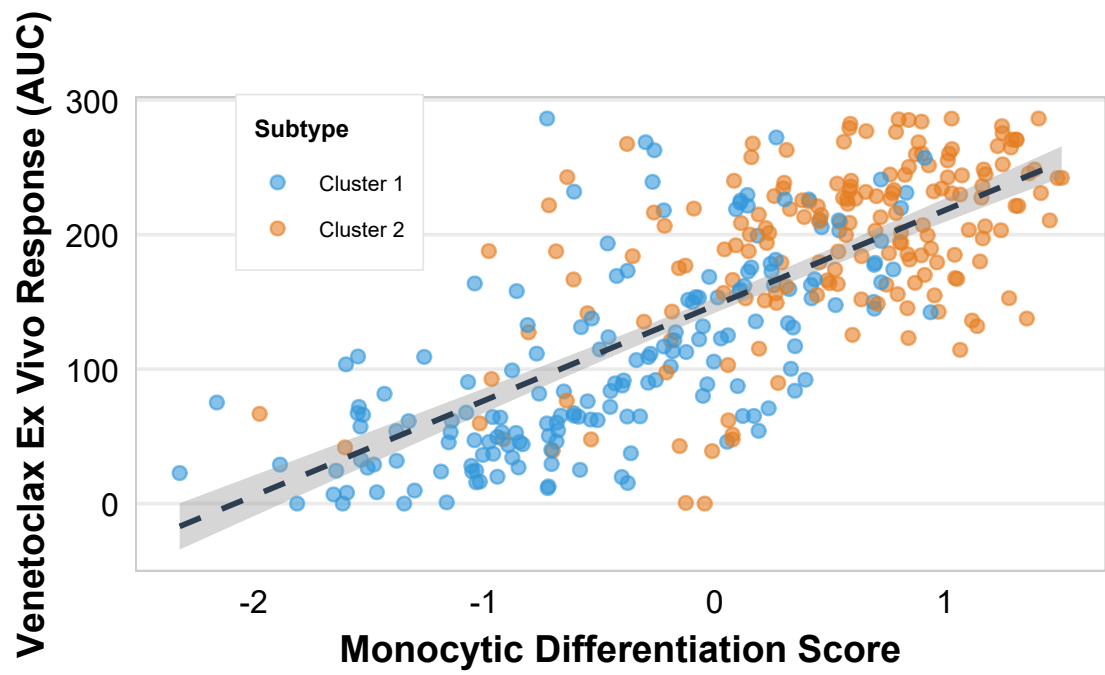

B. Longitudinal In Vivo Clonal Selection

Depletion of sensitive and expansion of resistant clones ($p < 2.2e-16$)

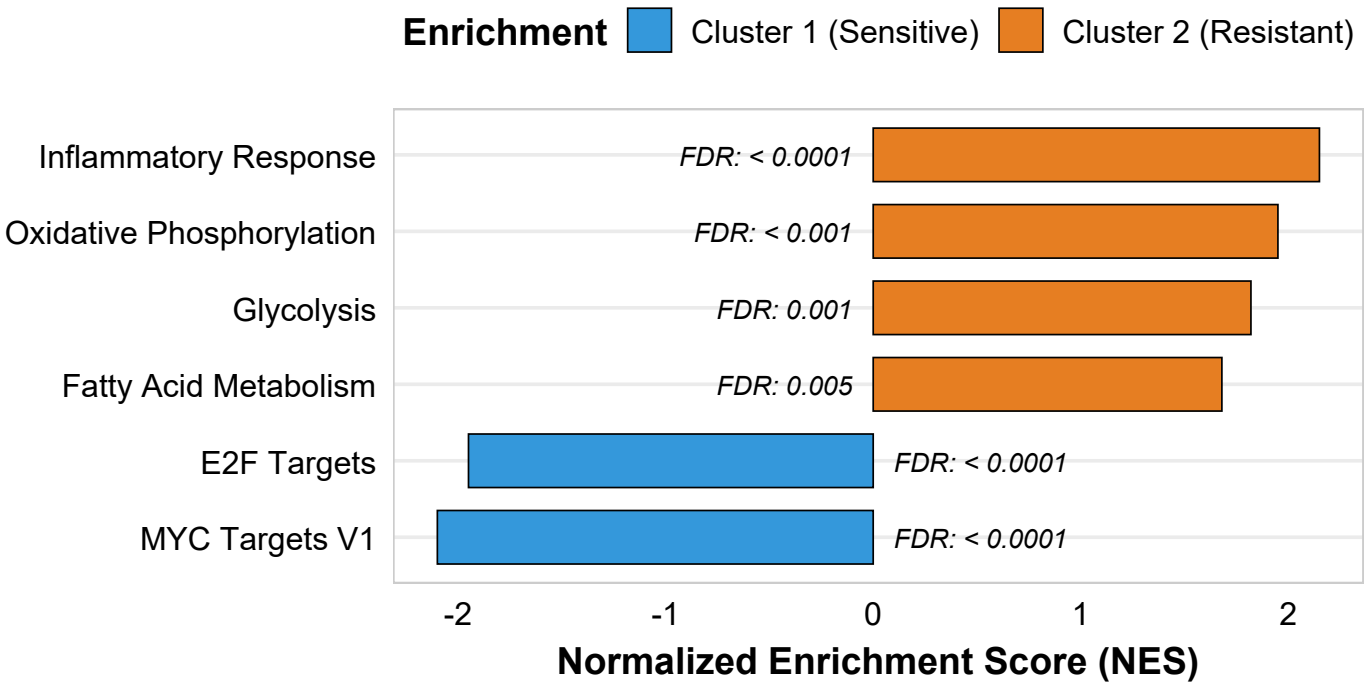

C. Monocytic Shift vs. Venetoclax AUC

Spearman Rho = 0.73 ($p < 2.2e-16$) | Resistance Axis

D. Metabolic & Pathway Enrichment (GSEA)

Cluster 2 co-opts high-energy metabolism and inflammatory signaling

E. Proteomic Validation

Enrichment of anti-apoptotic MCL1 and monocytic CD14
