

A. Single-Cell Resolution of the AML Microenvironment

Projection of GSE116256 Bone Marrow Niche coordinates

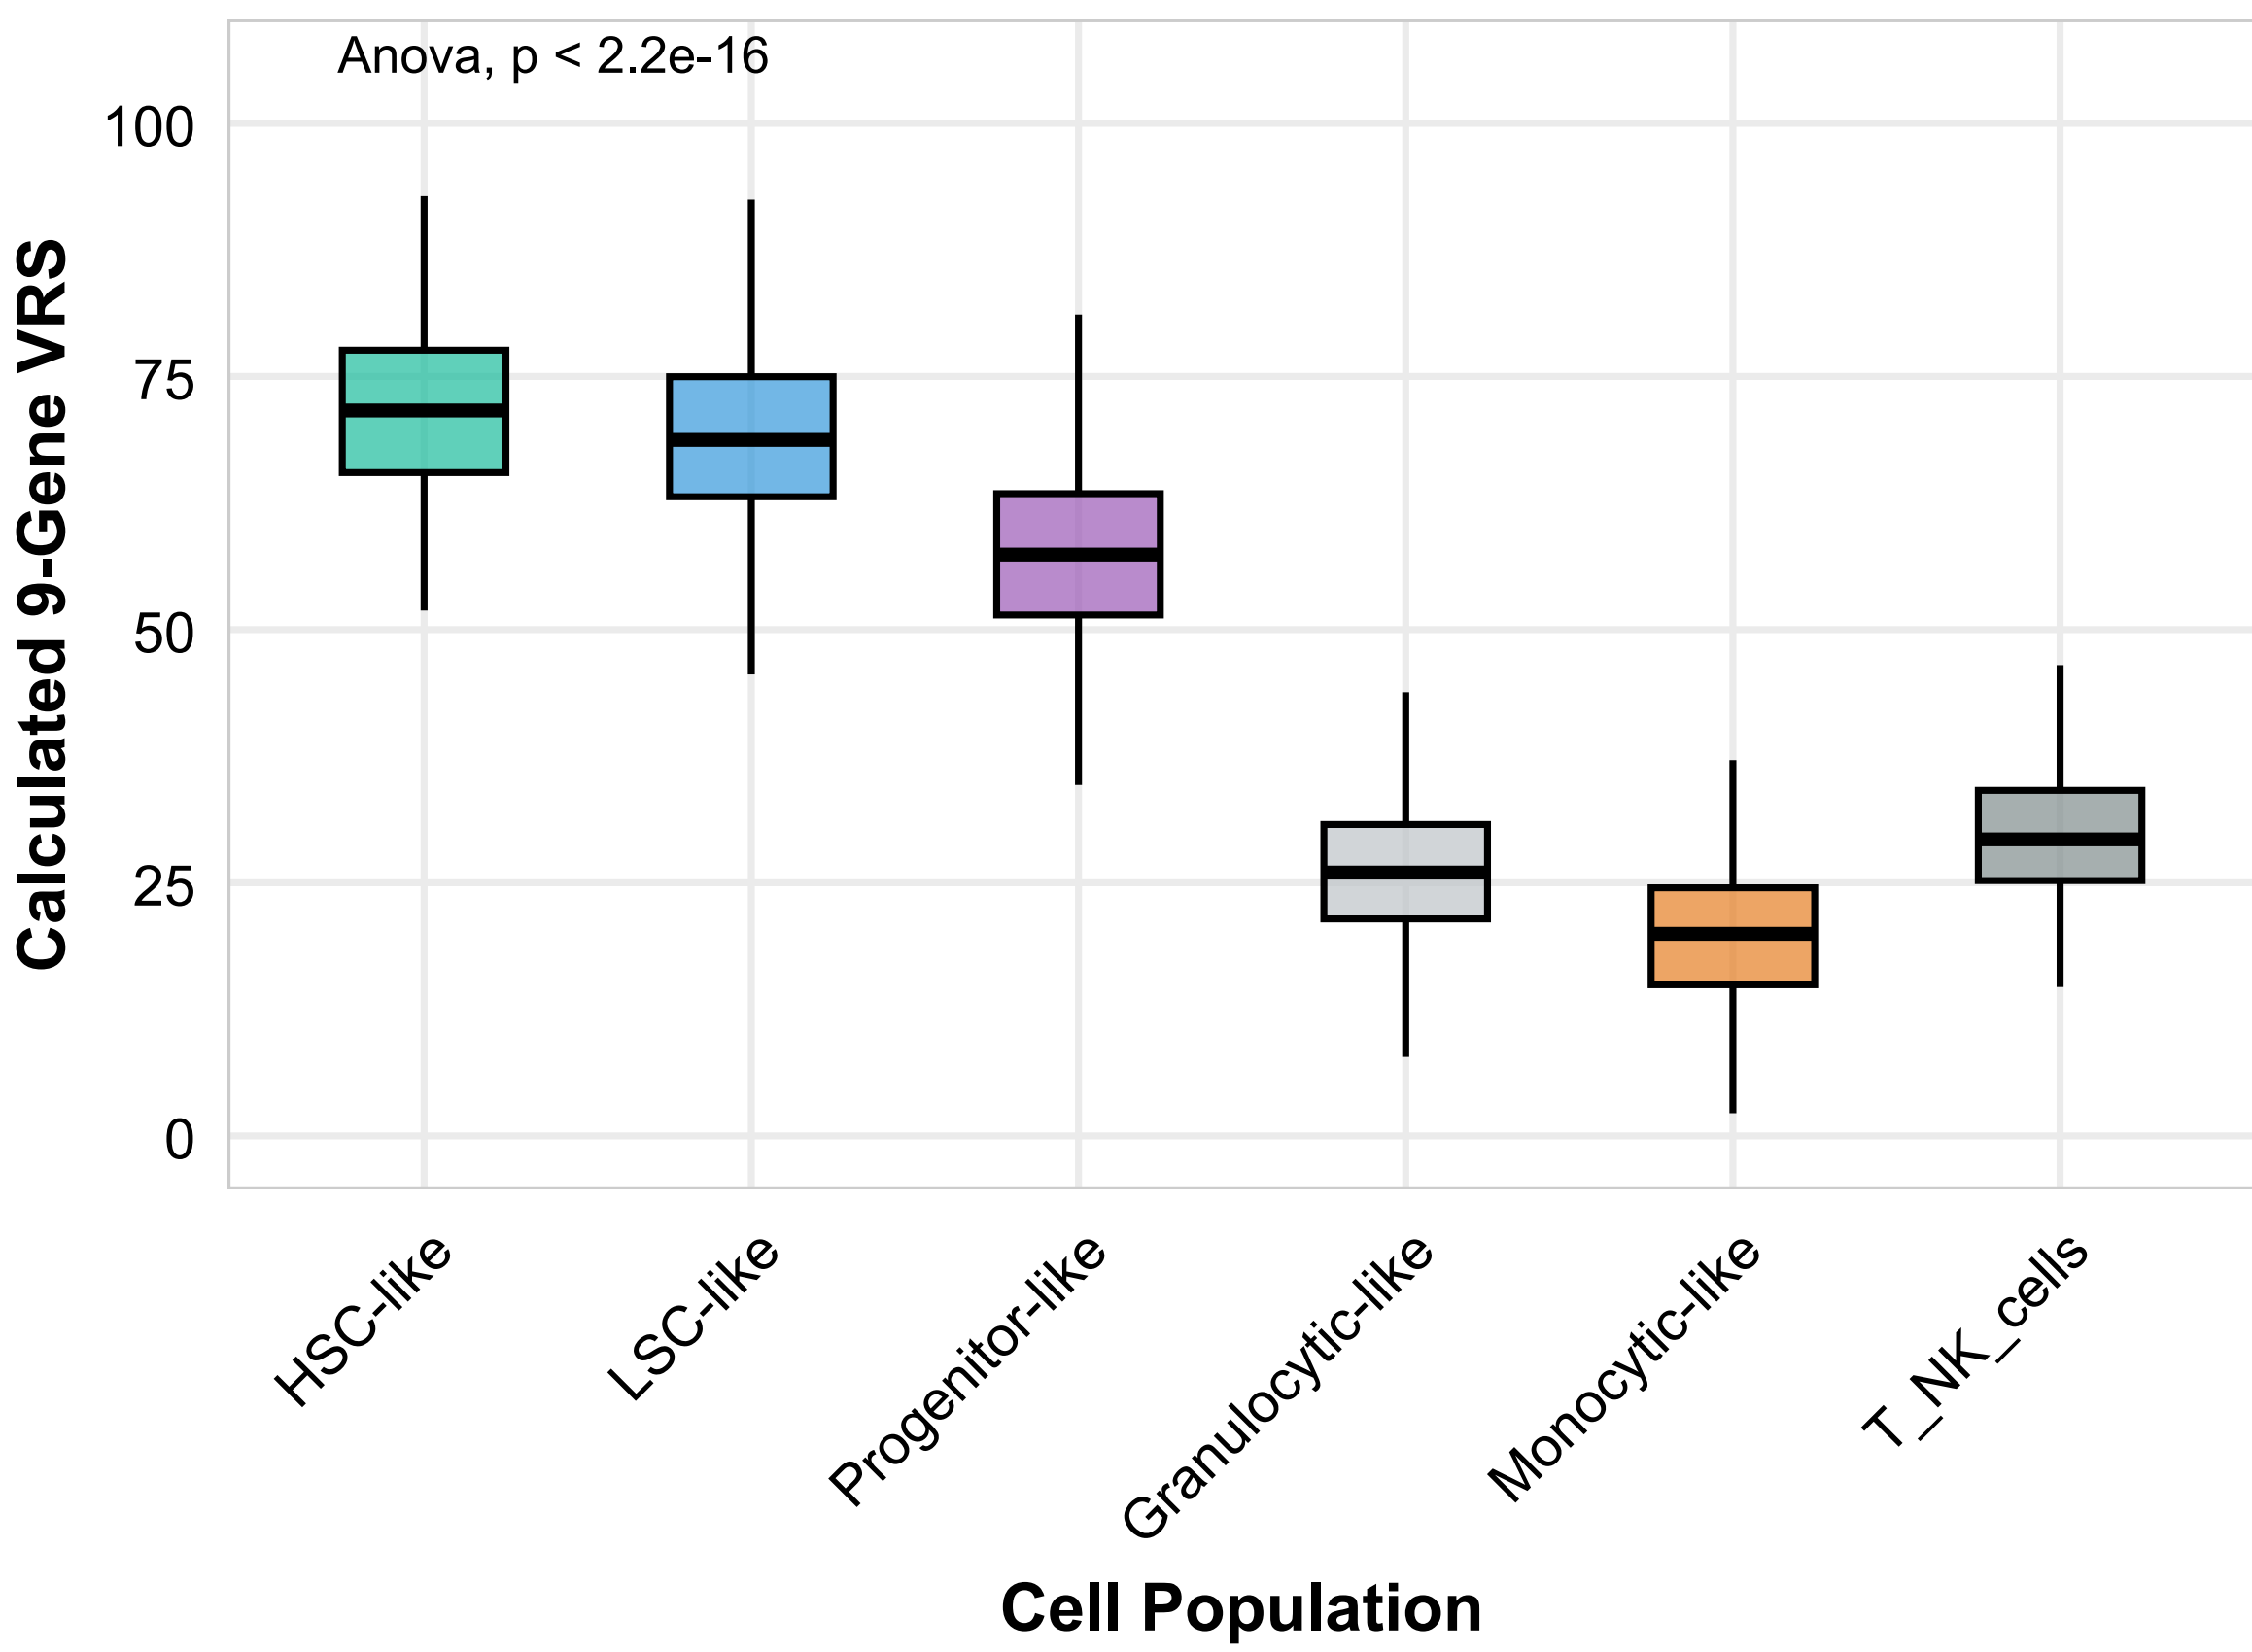

B. Venetoclax Response Score (VRS) in Cell States

Primitive stem-like blasts exhibit highest VRS (BCL2 dependent)

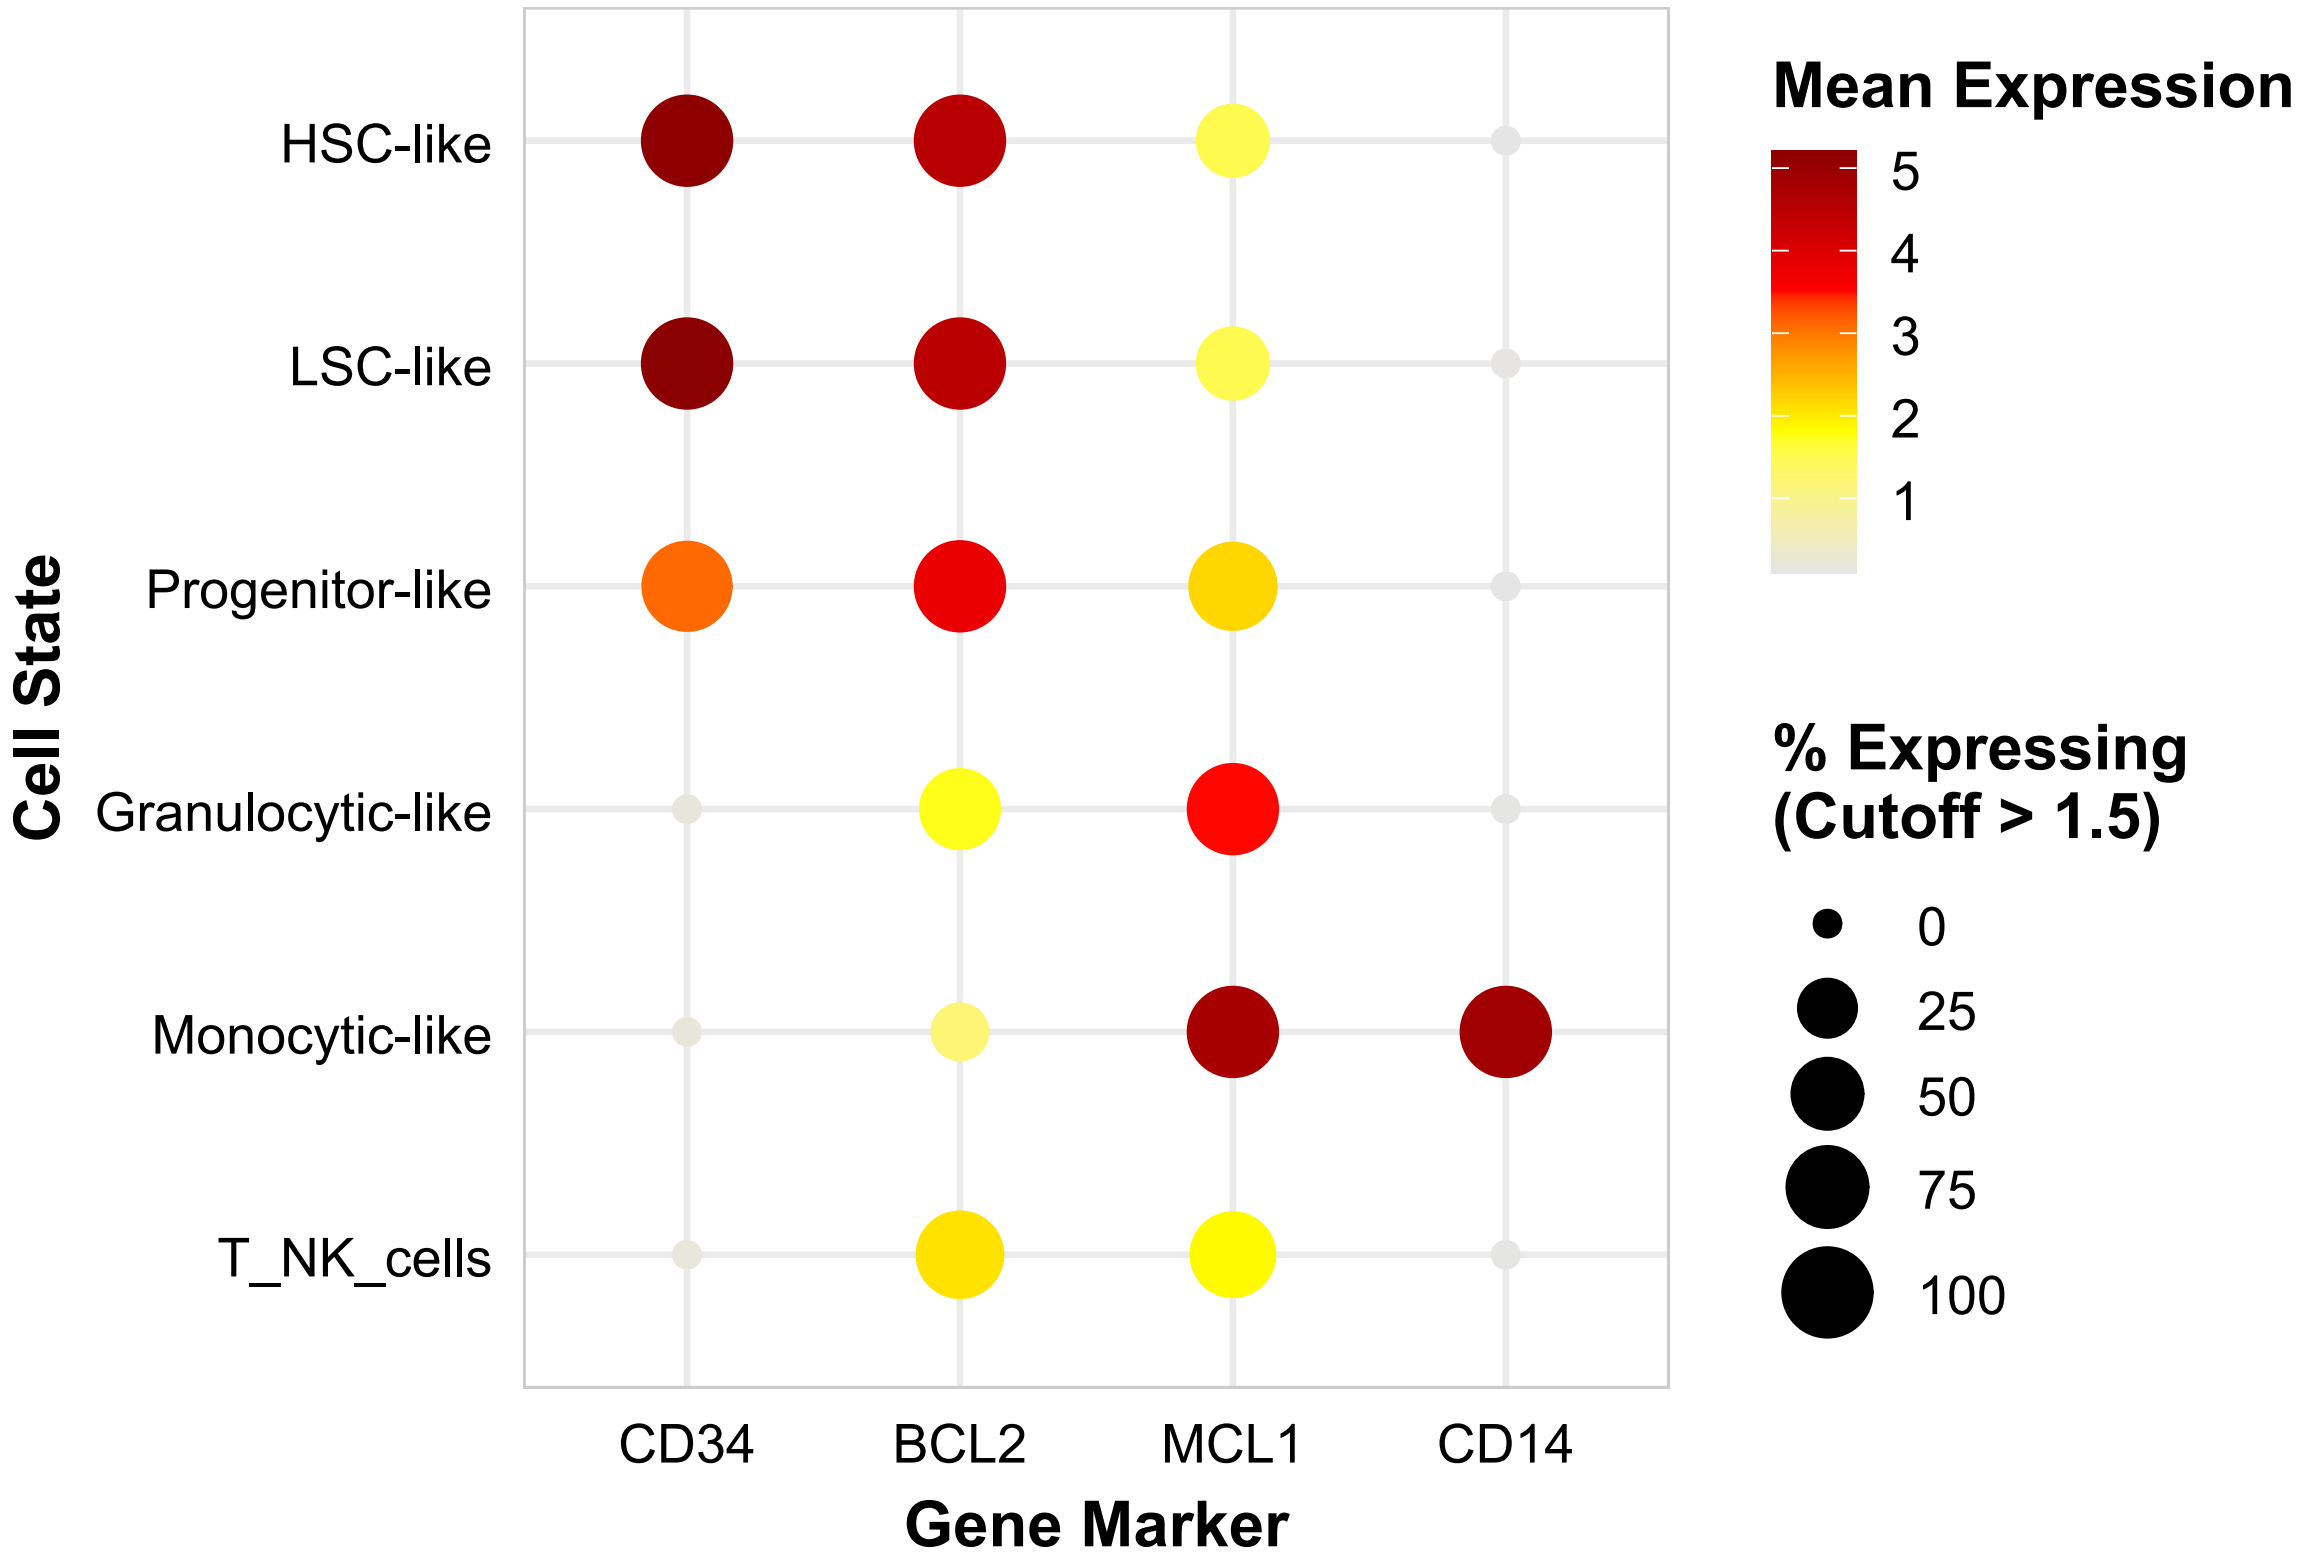

C. VRS Activity across Developmental Coordinates

VRS is significantly elevated in LSC/HSC vs monocytic clones

D. BCL2 vs. MCL1 Developmental Partitioning

Co-segregation of target genes with lineage markers

E. BCL2 vs. MCL1 Expression Trade-off

Developmental shift from BCL2 to MCL1 (Spearman r = -0.702)
