

A. Bulk Monocytic Score vs. Venetoclax Response

Spearman Rho = 0.74 (p < 2.2e-16) | Resistance Axis

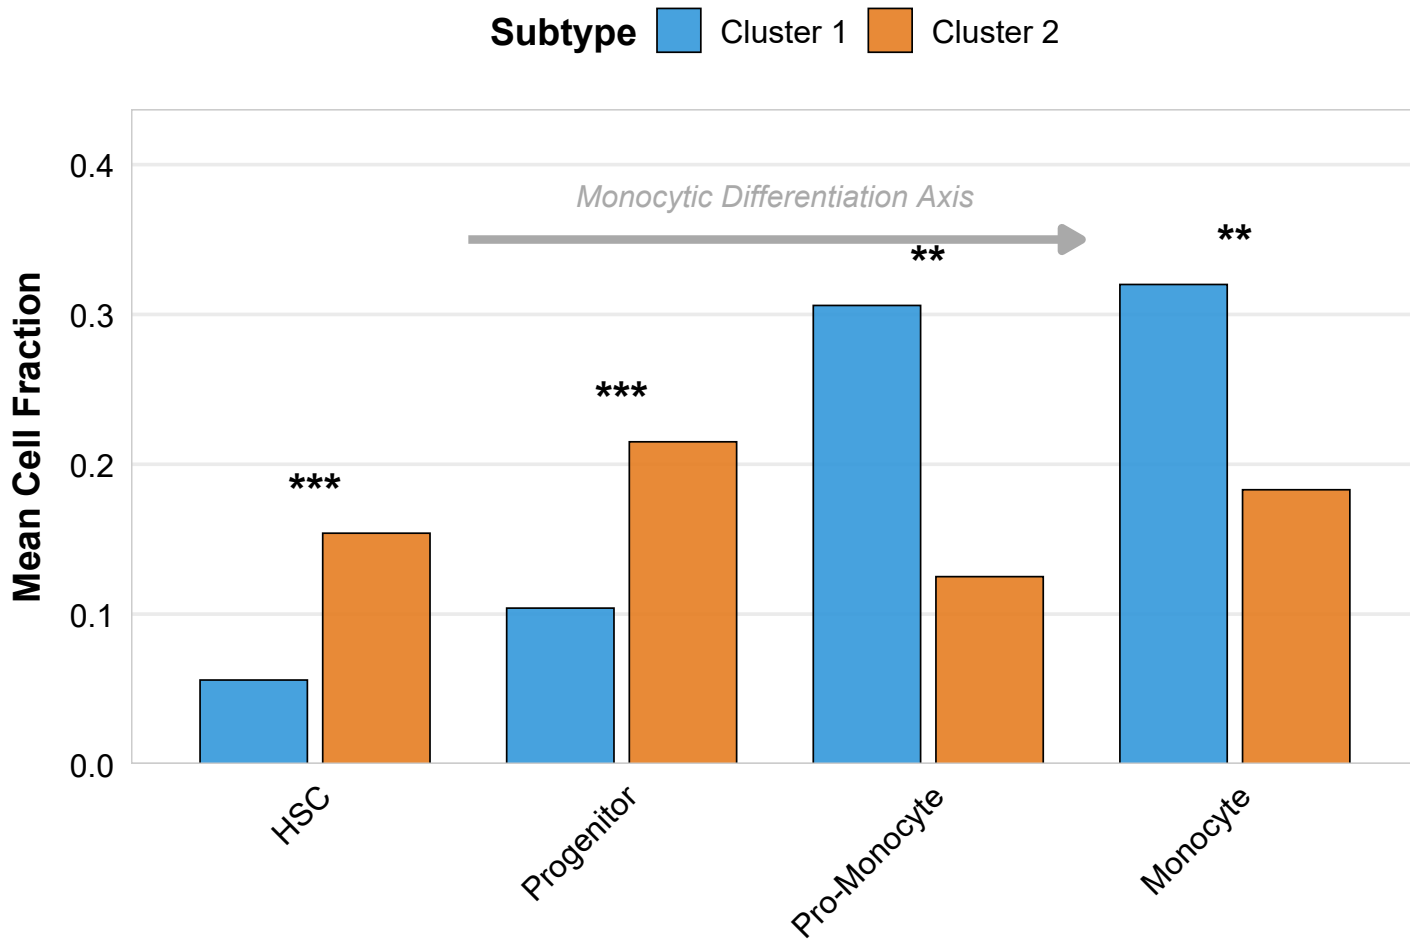

B. Bulk Proteomic Validation

Enrichment of anti-apoptotic MCL1 and monocytic CD14

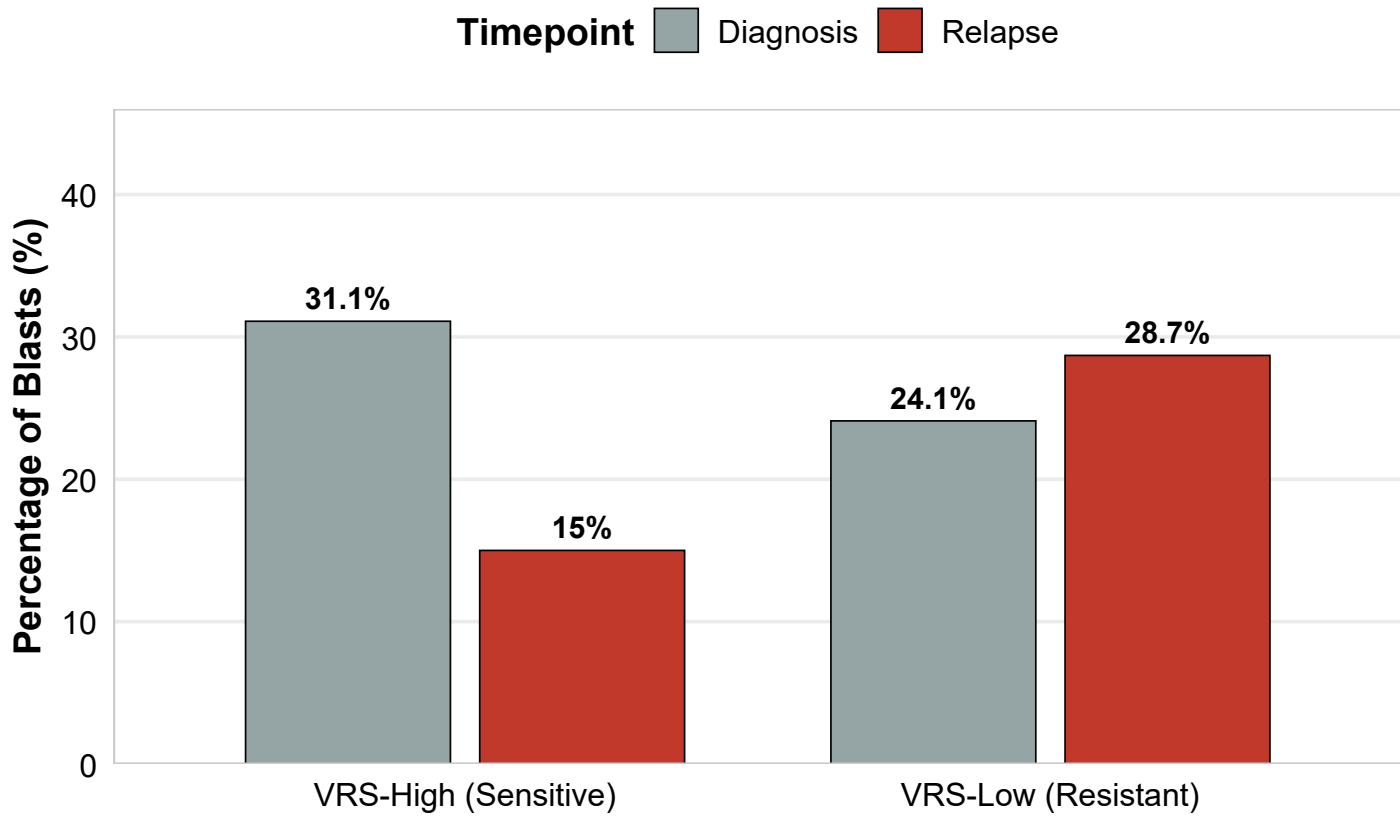

C. Blast Lineage States (scRNA-seq)

Cluster 1 blasts represent a differentiated monocytic phenotype

D. Longitudinal In Vivo Clonal Selection

Depletion of sensitive and expansion of resistant clones (p < 2.2e-16)

E. Metabolic & Pathway Enrichment (GSEA)

Cluster 1 co-opts high-energy metabolism and inflammatory signaling
